

Internet of Education

[Learning Economy](#) and the [Diplomatic Courier](#) are pleased to present a breakfast roundtable to announce the launch of our C-Lab initiative, recently with the State of Colorado, for global innovation research. Chris Purifoy, CEO of the Learning Economy will open the roundtable with a presentation around our exponential vision for the future of education and work and how the Learning Economy model and platform can contribute to lifelong learning, capturing and understanding the value of that learning and finally, helping close the skills gap between the companies and the workforce of the future.

We invite high-level influencers, planners and decision makers in lifelong learning to join the discussion to firstly explore what the education and work of the future might look like. And, to explore how learning games, ID systems, hiring apps, blockchains, learning management systems, online schools, libraries and credential programs can help schools, universities, employers and those seeking and providing the learning within these ecosystems prepare for the education and work needed for the future.
